Interio documentation

English version. The canonical (Russian) set is in ../index.md; the two are kept in step and both are shipped as PDF in ../pdf/.

Question	Document
Run it from scratch	BUILD.md
How the application is built	architecture/system-context.md
Where the data lives	database.md
API and error codes	api/conventions.md
What a module does / what to borrow	modules/
Deployment	operations/deployment.md
Monitoring	operations/monitoring.md
Secrets: what was fixed	security/secrets.md
What proves it works	verification/matrix.md, CI
What the audit changed	audit/portability-audit-2026-10-29.md

Rules

1. A claim without a check is just a promise — see verification/matrix.md.
2. No secrets in code. Configuration comes from the environment only (`../.env.example`).
3. Tests never touch the network or the production database: `DB_PATH` is replaced in `tests/conftest.py`, `KEEP_ALIVE_ENABLED=false`.
4. The code is split into modules under `app/` (`config`, `db`, `security`, `mailer`, `models`, `routers/*`); `server.py` only assembles and runs them. What to borrow and from where: modules/module-map.md.

Project control

- `forge.sh` / `forge.bat` start, stop, tail logs, run tests, manage the database and containers in one command; see the README section.
