Verification matrix

English version of ../../verification/matrix.md.

Check	What it proves	Command	CI
Tests (15)	authentication, the quiz and the protective properties work	`make test`	`ci.yml` → `tests`
ruff	static rules are respected across `app/`, `server.py`, `tools/`	`make lint`	`ci.yml` → `tests`
Security regressions	no password in code, no wildcard CORS, admin code from the environment	`make test`	`ci.yml` → `tests`
Start without optional configuration	works without SMTP and without `ADMIN_CODE` (admin sign-in answers 503)	start + `/`	`ci.yml` → `runtime`
Smoke test of a live instance	routes answer, admin data is closed	`make smoke-test`	manually after deploy
Documentation is consistent	links are alive, module specifications are complete, every document has a translation and a PDF	`make docs-check`	`ci.yml` → `docs`
Host check	environment and secrets are in order before start-up	`make doctor`	locally

What is not checked automatically

- Deployment to Render: `render.yaml` exists, but the deploy is not automated in CI.
- `data.db` survival across host restarts — depends on an attached disk.
- Behaviour under load and password brute force (no rate limiting implemented).
